geometry

wheel size	650c
wheel base	43" 110 cm
head tube angle	70°
seat angle	25-40°
seat height	24.5" 62 cm
medium BB height	32" 82 cm
size	X-seam (in / cm) 37-46 / 95-118

riders with X-seam lower than 37" / 95 cm have to order optional short boom
riders with X-seam higher than 46" / 118 cm have to order optional long boom

IMPROVED GEOMETRY

1. The new Slyway recumbent bike frames have a shorter wheel base for a better control in corners.
2. Shorter rear frame, and smaller rear droppouts, in order to save weight and improve geometry.
3. Seat position is set a little back respect to the old frame. This gives you a better weight distribution and great stability.
4. Morpheus seat is equipped with a new multi-pivot system.

THE BEST ERGONOMY

1. New Morpheus seat multi-pivot system (9 positions) allow you to adjust the bottom bracket - seat difference in height: this is very important to push on pedals in the best way.
2. Seat angle is also adjustable from 25° to 40° with 9 seatpost pivot points.
3. Morpheus seat features an upper sliding section for perfect size adaptability and best comfort.
4. Slyway Fixy stem features adjustable handlebar angle for best wrists and arms comfort.

GREAT MECHANICS

1. New Morpheus seat is 125 gr lighter than previous edition.
2. V-post CNC seatpost with an improved design, is 100 gr lighter than previous edition.
3. Bike frame is designed for a smooth and low friction chain line.
4. Rear dropout features a replaceable rear derailleur hanger.
5. Long front derailleur tube, allow you to use oversized chain rings.
6. Aluminium alloy eccentric ring, allow you to micro-adjust the front derailleur position.
